

## **Medamorph Selects Massive Networks Denver POP to Support Its Demand for Network Services and IT Solutions**

*This initiative signifies Massive Networks as a prominent network and solution provider within the technology and telecom industry.*

**LOUISVILLE, Colo. - Oct. 25, 2017 - [PRLog](#)** -- **Massive Networks**, an enterprise-class data transport solution provider, today announced that Medamorph, a medical solutions provider for end-to-end automation, has chosen Massive Networks as its data center solution partner, deploying within Massive Networks Louisville data center point of presence. This initiative signifies Massive Networks as a prominent network and solution provider within the technology and telecom industry. Enterprises everywhere can refer to Medamorph's network implementation as a case study when determining the scalability of One Pipe Multi-Connect.

Located at the technology center in Louisville, Colorado, Medamorph is an end-to-end automated solution provider to the medical industry. As a business that operates on patient and EMR records, the security that Massive Networks private connect offers provides Medamorph with an unmatched confidence amongst other data center operators and network providers. "Throughout the process, Massive Networks was extremely responsive and provided optimal information in each stage of the implementation process," said John Dougherty, a Senior IT Consultant Medamorph. "This experience has given us the confidence we need to share patient and EMR records securely, making us HIPAA compliant, between offices. Additionally, our bandwidth performance has improved exponentially. Massive Networks exceeded my expectations."

Medamorph also chose to deploy in Massive Networks Louisville point of presence (POP) based on the proximity to the markets that Medamorph serves. Ensuring reliable support for the growth of its client base and a more advanced architecture that meets the performance requirements created by this increase. The move has allowed Massive Networks to improve the latency limitations Medamorph was experiencing previously. "By moving into our Massive Data Center, Medamorph gained backup speeds from 100meg to 10gig and removed their risk exposure to the public Internet," stated Paul Mako, CEO, and CTO of Massive Networks. "Adding a secondary backup location and switch to our Denver data center location, we removed their point-to-point set up to a redundant fiber ring route enabling connectivity through a VLAN."

With years of experience in the telecom industry, Massive Networks aims to solve Enterprise businesses connectivity problems through its Massive One Pipe Multi-Connect Network Solution. By utilizing existing infrastructure, Massive Networks merges multiple and dynamic streams of data through a single pipe. The Massive Network One Pipe Multi-Connect Solution can provide Enterprise businesses with an optimal performance so the organization can run smooth and efficiently.
