

Denver Biz Tech Expo Awards Massive Networks as Best Solution Provider

One Pipe Multi-Connect Recognized As Best Solution at the Recent DBTE Event

DENVER - Sept. 26, 2017 - [PRLog](#) -- **Massive Networks**, an enterprise-class data transport solution provider, announced today that Denver Biz Tech Expo, a Colorado Technology Partners Board of Directors event for local business owners, has awarded them with the **2017 Best Solution Provider** for their One Pipe Multi-Connect Solution.

In an industry where scalability, connectivity, cost-effectiveness, and rapid deployments are of prime importance, the biggest challenge faced in network design is the need to manage connections across different providers.

With years of experience in the telecom industry, Massive Networks differs from most carriers by solving businesses connectivity issues with their **unique ability to blend carrier connections** through its One Pipe Multi-Connect Solution. Their Premium-Blended Internet merges up to 12 Tier 1 providers that businesses can rely on for dedicated Internet access (DIA). Additionally, the solution removes security issues by offering private line connections into Data Centers and Cloud Providers. These connections provide Enterprise businesses with a unique, yet fully optimized network that reduces cost and latency, in an efficient and easily managed fashion.

"I am thrilled that our product **One Pipe Multi-Connect** has been selected by the Denver Biz Tech Expo for their Best Solution Provider award," said Kevin Flake, Chief Operating Officer of Massive Networks. "We were not expecting the award. In fact, after awarded with the trophy, the staff informed us that they selected anonymous attendee's to engage with our booth members and inquire about our services. The fact that we were on point and able to deliver the value the award variables required to achieve it - is fantastic. Until now, the cost of private networks has been unattainable for most businesses. Our company solves that problem by delivering a solution that allows many secure "connects" of data to reside in the same connection with your Internet. This approach provides our clients with superior performance and incredible cost benefits. The award is truly a gift; it justifies our place within the technology industry, and we appreciate the acknowledgment from our fellow tech experts in Denver."
