DATA SHEET:

OFFICE-TO-OFFICE CONNECT

INCREASED SECURITY & PERFORMANCE

OFFICE-TO-OFFICE CONNECT

The Massive Networks One Pipe Multi-Connect network solution contains multiple, independent, secure, and dynamic Carrier Ethernet streams of data. Using secure separate streams ensures that each service has switching autonomy meaning each stream can go in a different direction.

- Internet streams go to our Premium Blended Internet.
- MegaLan and GigaLan go from Office-to-Office, not over the Internet.
- Cloud Exchange connections go directly to Cloud Platforms and Service Providers, not over the Internet.
- Private Data Center connections from your offices go to the Massive Data Center, not over the Internet

By using Massive Networks One Pipe Multi-Connect Network solution, you can get the very most out of a Carrier Ethernet network. Separate and private streams run within the Multi-Connect technology, providing superior performance and security while getting you the most out of every system dollar.

Massive Networks will custom design a system for your company with just the right amount of each service so that your business runs smoother and more efficiently than ever. Contact Massive Networks for a free custom design and quote for your network services wherever you are in the country or the world.
